e-FREIGHT AND THE COMMUNICATION BECOMES DIGITAL

E-FREIGHT ? WE'RE READY!

Nova Systems: HEADS UP as of January 1st 2014 the IATA digitalization of air transport documents project will be in effect!

All Air Transport documents already in use by shippers and air lines will be substituted by Electronic Messages and Documents.

Since 1998, Nova Systems has pursued technology which utilizes Cloud systems and has already integrated the e-freight certified procedures with the BeOne solution for IATA Agents.

Through BeOne Cloud Forwarding Suite it is therefore possible to automatically transmit messages requested by the Airline Companies through a CCS (Cargo Community System) IATA certified and Nova Systems partner. We have also allowed for the possibility of sending digital documents

so as to inform Airport Agents of their area of competence.

Our solution relieves you from any technical commitment, giving support in the registration procedure, other than installing all the software procedures necessary to correctly execute all of the messaging.
